Report Notes & Disclaimer:

This analysis was performed by High-Performance Liquid Chromatography (HPLC) with Ultraviolet (UV) detection coupled with Electrospray Ionization Mass Spectrometry (ESI-MS). Purity value is calculated by integrating chromatogram peak areas at 220 nm. Peptide content was determined by nitrogen content elemental analysis. Salts, counter-ions, sugars (excipients), or residual water molecules resulting from lyophilization are not counted as chemical impurities under normal UV chromatographic detection protocols. The results detailed in this Certificate of Analysis relate solely to the specific sample lot number tested as received. For laboratory research use only. Not for human use.

MASS SPECTRUM (ESI-MS DECONVOLUTED)

Deconvolution Results:
Expected component masses (amu):
GHK-Cu 401.91 | KPV 342.43 | BPC-157 1419.53 | TB-500 4963.55
Conclusion: All 4 component masses observed; identity confirmed.
